attempt to get a story out of the combined pay gap data for years
ending 2017,2018,2019
data = readRDS("PayGap_Combined.rds")
Separate the name and position and gender of the responsible person
data$respFirstName <- word(data$ResponsiblePerson, 1, sep=" ")</pre>
data$respLastName <- word(data$ResponsiblePerson, 2, sep=" ")</pre>
data$respPos <- str_replace(word(data$ResponsiblePerson, 2, sep="\\("), "\\)", "")
genders <- distinct(gender(data$respFirstName))</pre>
data$name <- data$respFirstName</pre>
dataWithGender <- data %>% inner_join(genders)
## Joining, by = "name"
What is the ratio of male/female within the responsible person's population
gcounts = dataWithGender %>% count(gender)
gsum <- gcounts %>% summarise(sum = min(n)) %>% merge(gcounts)
gsum$prop = gsum$n / gsum$sum
gsum
      sum gender
                     n
                           prop
## 1 8488 female 8488 1.000000
## 2 8488 male 13516 1.592366
```

Turns out that for years ending on 1017-2019, there were 60% more males responsible for pay gap policy enforcements and reporting than women.
